

Ecoland Brasil

Ecoland do Brasil Consultoria

Parnaíba, Brazil

Services Rendered

- Site Reconnaissance
- Environmental Impact Study Audit
- Resort Master Plan Support
- Environmental Consulting and Permitting Support

Project Summary

Ecoland is a master planned development within the Ecocity Brasil site, which extends over 8,000 hectares on the north coast of the State of Piauí, in Northeastern Brazil. The Ecocity property includes protected areas with large dune fields, mangrove estuarine wetlands, interior lakes and dynamic beachfront.

The developer of Ecoland engaged ATM to direct and supervise the environmental permitting process, involving both State and Federal authorities. The Client was also very interested in working with existing development partners and regional consultants and engineers, but identified the need for the experience that international specialized consultants such as ATM would bring to their team. ATM conducted a thorough review of environmental impact studies completed to date, and provided strategic recommendations for the planning and permitting process. ATM coordination and support to the Client included recommendations for the participation of local consultants, which is in the process of being implemented.

ATM is providing support to the client on a range of engineering and environmental issues in order to most effectively direct the master planning and environmental permitting process.
