

Samaná Village

Marina, Coastal and Civil Engineering Services

Samaná, Dominican Republic

Services Rendered

- Site Assessment and Conceptual Master Plan
- Charrette Participation
- Marina Conceptual Master Plan
- Beach Construction
- Resort Infrastructure Evaluation (Water, Wastewater, Stormwater, Road Alignment)
- Bathymetric Survey

Project Summary

ATM was retained by a Spanish investment group as the marina and coastal engineering consultant for their project in Samaná, Dominican Republic. ATM performed a site assessment and participated in a Conceptual Master Plan Charrette.

Immediately after the initial on-site conceptual master plan workshop, the development team, lead by Tourism & Leisure (an Europraxis Consulting Co.) incorporated ATM's site engineering capabilities, specializing in resort infrastructure and field services.

The project is located in the vicinity of the town of Samaná, and is expected to include a condo-hotel, commercial zone, residential zone and a marina.

ATM performed a comprehensive analysis of the marina opportunities for this project, developed an artificial beach concept, produced marina conceptual layouts, and evaluated critical aspects of the infrastructure needs for the development of the project on the beautiful but challenging rugged terrain.
