- Grant Funding Assistance
- Regulatory Permitting
- Dredge, Disposal, and Sedimentation Study
- Fuel System Replacement Consulting
- Engineering Design and Bid Documents
- Construction Contract Administration/Owner's Representative Services
- Continuing Consulting Services

Project Summary

ATM began working with The City Marina Company in 1994 as the City of Charleston was privatizing the 30-year-old municipal marina located in the heart of historic Charleston, SC. Detailed economic and investment strategies were developed and were subsequently followed by several years of phased improvements and expansions to the facility. ATM provided a full range of consulting services, including extensive regulatory permitting and complete redesign and reconstruction of the marina's infrastructure and docking facilities.

The City Marina remains a key component of Charleston's overall downtown redevelopment plan and serves as an anchor for the upland, providing easy access to everything historic Downtown Charleston has to offer. Serving as the primary entry into the city for all transient boaters, the marina also offers charter services, tour boats, restaurants, and a full service ship's store.

The most recent improvements at the marina include the addition of a 1,000-foot-long transient "Mega Dock" and high speed fueling stations specifically designed to capture the largest boats passing through Charleston's historic seaport.

ATM continues to provide consulting services to the City Marina Company on this and various other marine ventures either being planned or implemented in and around the southeastern U.S. by the client.

Named *Marina Dock Age* 2005 Marina of the Year
Recipient of PIANC's Jack Nichol Award 2009 for outstanding marina design
