

Boat Ramp Management Plan City of Jacksonville, Florida

Services Rendered

- Detailed Facility Inspections
- Master Planning
- Web Page Development

Project Summary

ATM recently completed the Boat Ramp Management Plan for the City of Jacksonville's 23 public boat ramp facilities. Work for this project entailed an inspection of each of the facilities, and determination of a schedule of short- and long-term maintenance based on priorities, cost and level of use.

An additional aspect of this project was the creation of a site-specific web page (see below) displaying information about the location, size, limitations, navigation concerns, access areas, and other user-friendly data for each facility. This web site is accessible to the public and linked to various city and state servers.
